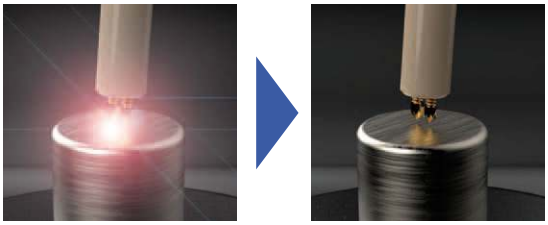
Functions for Reliable, Easy Measurement

Built-in spark discharge reduction function

Spark discharges become more likely with measurements of higher voltages.The BT3564 limits the current that flows when contacting battery packs, thus reducing spark discharges.
Furthermore, the contact check function automatically switches to measurement mode as soon as it confirms contact between the probe and the battery pack terminal.



Analog output function

Complete with a built-in resistance value analog output function. Combine it with a recorder or logger for total resistance value monitoring such as extended vibration testing or battery evaluation, and monitoring resistance changes due to temperature, humidity, or other environmental changes.

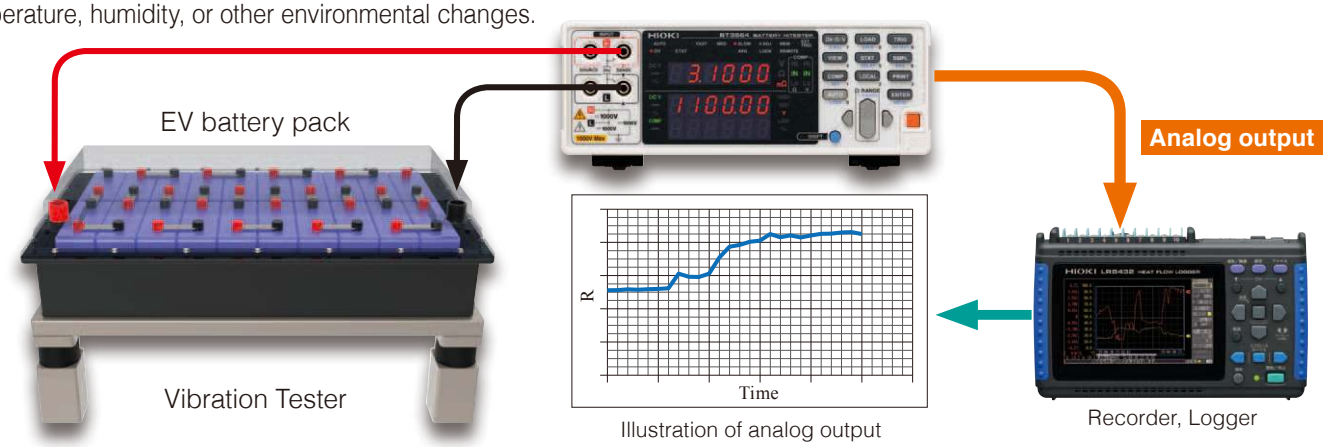


Illustration of analog output

Four-terminal AC method

Resistance measurement uses the 1 kHz AC 4 terminal method for measurement unaffected by wiring resistance, etc.

Comparator function

Simultaneous, comprehensive output of resistance and voltage results.

Save measurement setting configurations

Up to 126 measurement configurations such as comparator setting criteria can be saved and reloaded. Saved configurations can be selected by external control.

Averaging function

Stable readings can be consistently obtained by averaging two to 16 measurements.

Measurement error detection

Detect poor contact or probe disconnections for highly-reliable measurements.

Self-calibration

Minor drift and gain fluctuations within the internal measurement circuitry are automatically corrected to maintain high accuracy.

Conditions of Guaranteed Accuracy

○ Temperature & humidity : 23 ˚C ±5 ˚C, 80% rh or less (non-condensating), ○ Warm-up time : At least 30 min.
○ After executing zero-adjustment ○ Average of 4 measurements
